About Us

Speaking of Research (SR) is an advocacy group that provides accurate information about the importance of animal research in medical, veterinary and scientific research. SR is run by a voluntary committee of scientists and advocates who believe animal research remains crucial to medical progress.

Speaking of Research aims to challenge animal rights dominance of the issue by participating in talks and debates in North America and Europe, and by utilizing web-based communications to organize a network that can give information and support to all who care about medical progress.

Contact Us

To get involved, e-mail us at: contact@speakingofresearch.com

Our members have presented at schools, universities and research institutions around the world. Please contact us if you wish to arrange a speaker.

Speaking of Your Research

Speaking of Research is keen to help scientists, veterinarians, and animal technicians explain their work. We want people to write 400-1000 words about the importance of the work that they do, and why they do it. If you are interested in contributing to a guest post for the website, please contact us.

Why do we support animal research?

- Animal Research has contributed to over 80 Nobel Prizes in Physiology or Medicine. Insulin, penicillin, TB vaccine and modern cancer treatments would not have been possible without animal research.

- Techniques such as heart transplants, bypass surgery, and blood transfusions have all been developed and improved using animals.

- Animals benefit too. Most veterinary advances have been developed using animal models.
